PERSONAL SUMMARY

Fourth year computer Science Engineering student with a passion for AI and UI/UX. Well experienced in machine learning ,having experience in modifying deep learning architectures and building from scratch using custom training loops. Focused on expanding my skill set further in AI, with an eye toward building applications that make complex intelligence accessible and impactful for everyday users.

SKILLS

- C
- Java
- Python
- Blockchain
- NodeJS
- Flutter
- AI
- ML
- Yolov8
- OpenCV
- ReactJS
- Selenium
- Springboot
- Version Control
- Clean code practices
- Microservices
- Agile Workflow
- Documentation
- Front-end development
- Team collaboration

INTERNSHIPS

SDE INTERN, 07/2025 - 01/2026

Nissan Digital LLP

- Key Skills: Java, Springboot, Selenium, Python
- As a part of this internship, I had the opportunity to work on software development as well as automation testing using Selenium. Aside from these, I also had the opportunity to contribute to front end development tasks.
- Gained exposure to microservices architecture and industry standards, contributing to a deeper understanding of modern software design.
- IT / Computers - Software

STUDENT INTERN, 12/2024 - 02/2025

ICT Academy

- Key Skills: Flutter
- ICT academy provided a one month internship on teaching the basics of Flutter development.
- We learned key skills involved in development of an android application and replicated UI of various applications.
- The end was marked by developing a flutter app for tracking the dosage of medicine a person has to take.
- We integrated it with Firebase for authentication and database.

IT INTERN, 12/2024 - 01/2025

Smart City Trivandrum

- Key Skills: AI ML Web Development
- Developed a deployable system to monitor illegal trash dumping using city surveillance cameras, enhancing urban cleanliness.
- Utilized vision-based AI models, experimenting with multiple frameworks to identify the optimal solution.
- Contributed to creating a greener, law-compliant city environment through AI-driven monitoring.

EDUCATION

Mar Baselios College of Engineering And Technology (Autonomous), Expected in 05/2026
B.Tech.: Computer Science & Engineering
CGPA: 9.20 / 10

Christ Central School, Thiruvalla, 07/2022

12th: CBSE

Percentage: 87 / 100

Christ Central School, Thiruvalla, 07/2020

10th: CBSE

Percentage: 97 / 100

PROJECTS

Valid8Care – AI Agent Automation Engine

(Dec 2025 -Jan 2026)

• Tech: AI Agents, Microservices, System Design

Designed and developed a modular AI agent system to automate validation of healthcare provider data.

Implemented a microservices architecture to enable scalable validation workflows.

Built an automation pipeline capable of processing and verifying provider records efficiently.

Decentralized Credential Verification and Recruitment Network

(Jul 2025)

• Tech: Hyperledger, Blockchain, MongoDB, Docker, Node.js, TypeScript

• Repository: <https://github.com/PavithraMp23/BOSE>

Developed a blockchain-based platform for managing and verifying academic and professional credentials.

Implemented tamper-proof credential storage using distributed ledger technology.

Built microservices for credential issuance, verification, and recruitment workflows.

Temporal Document Drift Retrieval (TDDR) – Temporal RAG System

(2026)

• Tech: Python, RAG, Vector Databases, NLP, LLMs

• Repository: <https://github.com/PavithraMp23/tddr>

Built a Temporal Retrieval-Augmented Generation (RAG) system to detect regulatory document drift over time.

Implemented semantic retrieval using transformer-based embeddings for legal document search.

Developed a pipeline to extract, embed, and retrieve regulation data from PDFs for compliance verification.

Trash Disposal Detection System

(Dec 2024 - June 2025)

• Tech: Artificial Intelligence, Machine Learning, Computer Vision

Developed a computer vision system to detect illegal waste disposal events from surveillance footage.

Implemented machine learning models for human activity detection and waste movement tracking.

Designed algorithms to reduce false positives caused by static waste or unrelated human movement.

Medicine Monitoring and Tracking App

• Tech: Flutter, Firebase Repository: https://github.com/Helen-Susan/Flutter_project

Built a mobile application to track medication schedules and send reminders to users.

Integrated Firebase backend for real-time data storage and synchronization.

Implemented features for medicine logging, reminders, and inventory alerts.

Uber Price Prediction System

• Tech: Python, Pandas, Machine Learning Project

• <https://colab.research.google.com/drive/1FvCjqekMaHtGMRGEWqKVZ3-4fyFOeKXq?usp=sharing>

Developed a machine learning model to predict Uber fares based on trip features.

Applied multiple regression techniques to analyze pricing patterns.

Performed data preprocessing, feature engineering, and model evaluation using Python and Pandas.

ASSESSMENTS CERTIFICATIONS

- Python fundamentals- 91 / 100
- Deep Learning- 57 / 100
- Introduction to Large Language Models- 56 / 100
- MySQL: Understanding & Implementing Joins

- MySQL: Querying Data
